

BIO-ORGANIC CATALYST
THE POWER IN NATURE®

POOL-CAT™ AND SPA-CAT™
FOR SPARKLING CLEAR WATER

CONSUMER PRODUCT LINE

Pool-Cat™ and Spa-Cat™ products are the most advanced water maintenance offerings in the marketplace. Safe and highly effective biocatalytic chemistry has shown in numerous studies to improve water quality and safety, while reducing chemical usage and operational costs due to elimination of mineral fouling on tiles and filters.

The key to the Pool-Cat™ and Spa-Cat™ performance lies in the power of oxygen transfer, unlocking nature's mechanism for restoration of water naturally, rather than relying on traditional oxidizing chemical agents that have been shown to lead to potentially harmful chemical byproducts in the water. Oxidative agents are also irritating to skin and eyes, as well as producing volatile compounds which can impair breathing in many people.

Dissolved oxygen in water determines water's ability to sustain life. A naturally clean and clear body of water is high in dissolved oxygen content, as this is critical to the breakdown of contaminants. Analytical reports of water conditions will identify both dissolved oxygen levels, as well as pathogen counts, in determining the life-sustaining health of water.

Current chemical agents in the marketplace are designed to kill pathogens through an oxidation reaction. These chemical agents are measured and added to reduce the potential of pathogens in the water. Unfortunately, they can be highly irritating and contain problematic byproducts that have been identified as potentially cancer causing when ingested over time.

Bio-catalytic oxidation mechanisms, utilized in the Pool-Cat™ and Spa-Cat™ products, work in an entirely new way that mimics more closely nature's restorative mechanism of oxygen transfer. Rather than burning up the organic compounds within the water, the Pool-Cat™ and Spa-Cat™ products act in rapidly dissolving organic compounds, while simultaneously increasing the dissolved oxygen content within the water. Cloudy conditions in the water are eliminated.

The end result is the cleanest, clearest, and purest water quality ever possible.

Pool-Cat™ and Spa-Cat™ products enhance water quality and swimmer safety, and substantially reduce the long-term risks of irritating and potentially unhealthy chemical byproducts and vapors. Pool-Cat™ and Spa-Cat™ products bring significant costs savings in chemical usage and maintenance requirements.

The future of super clean, clear and healthy water quality is now here with Pool-Cat™ and Spa-Cat™.

SPA-CAT™

- Produces sparkling clean and clear water with one drop for every 250 gallons of water.
- Dissolves oils and organic residues.
- Reduces chemical usage and vapors.

Directions: Add one drop (1ml.) for every 250 gallons (1,000 liters) once a week, or before use of spa.

POOL-CAT™

- Suitable for fresh and saltwater pools.
- Lowers harsh skin-irritating chemicals and reduces sanitizer consumption by 40 – 60%.
- Eliminates mineral scaling of tiles and filters, lowers maintenance costs.
- Ensures better water clarity to the pool bottom, reduces backwashing.
- Enhances the safety and health of swimmers.

Directions: For the first week, add 5 capfuls (2 1/2 oz) for every 10,000 gallons (100 ml per 100 m3) of water into the pool skimmer/filter box. Thereafter, each week, add 2 capfuls (1/2 oz) for every 10,000 gallons (40 ml per 100 m3) of water into the pool skimmer/filter box. If the pool is very heavily used, add twice a week.

POOL-CAT™ - AQUATIC CENTERS

- Suitable for fresh and saltwater pools.
- Lowers harsh skin-irritating chemicals and reduces sanitizer consumption by 40 – 60%.
- Eliminates mineral scaling of tiles and filters, lowers maintenance costs.
- Ensures better water clarity to the pool bottom, reduces backwashing.
- Enhances the safety and health of swimmers.

Directions: Each week, add 2 capfuls (1/2 oz.) per 10,000 gallons (4ml per 10,000 liters) of water into the pool skimmer/filter box.
